

## McKay Securities PLC

“

The advice and guidance offered by HG Technology allowed us to make informed choices about the future of our IT infrastructure and how it will support the business.

”

Andy Phillips, Finance Manager  
McKay Securities PLC

McKay Securities is a major commercial property investment company with REIT status focussed on London and South East England. Faced with aging server technology that was outdated and expensive to maintain, they approached HG Technology to ascertain their options.

We advised them of their choices including internal and cloud based hosting options and a cloud based model was selected. We then worked closely with the management team to transfer existing applications across as part of our project management process.

The new solution not only delivered improved infrastructure, security and reliability it allowed the organisation to align software versions of applications across the business and enable much easier on-boarding of new applications. All this was achieved while delivering operational cost savings of 30%.
