

The Winston Group

“

A great solution that allowed all parties to keep their legacy systems while transforming the effectiveness of our internal processes.

”

Mita Shah, Accountant
The Winston Group

Established for over 20 years, The Winston Group is an innovative property investment, asset management and property development company based in London. Rapid growth of the business highlighted the complex process involving the transfer of data between the agent's management system and the owner's finance system.

Working closely with the client's operational team and software vendors, we designed a bespoke system to automate the transfer of data between systems via an extraction process on the agent's Qube Property Management software which, after checking by the agent, could be imported quickly into the owners Sage Accounting software.

The automation between system has saved The Winston Group two days of accountant time each and every month, as well as improving the data accuracy and freeing the accountant to focus on higher value tasks.
