

HG TECHNOLOGY

1. The Challenge

The Nuffield Foundation, a charitable trust established in 1943, aimed to modernise its internal operations. Their outdated SharePoint site, hosted on an internal server, required an upgrade to improve security, disaster recovery, and user experience. The Foundation needed a cloud-hosted solution with similar functionality but enhanced design, navigation, and efficiency.

2. The Approach

HG Technology collaborated with the Foundation's IT team to design and implement a modern, cloud-hosted SharePoint site. The new platform featured improved security and a robust disaster recovery process. Emphasis was placed on creating a user-friendly structure with enhanced navigation. By leveraging Office 365 tools, including Microsoft Flow and SharePoint's document management features, HG Technology integrated Artificial Intelligence into business processes, automating routine tasks and freeing staff to focus on higher-value activities.

4. The Feedback

"HG Technology's understanding of our requirements allowed them to deliver a simple yet elegant solution. We're delighted with the result."

– Elaine Graham-Leigh, Information Governance & Systems Officer, The Nuffield Foundation

3. The Outcome

The modernised SharePoint site provided an intuitive and efficient platform, significantly improving navigation and usability. Automation reduced the time spent on repetitive tasks, saving resources and enhancing productivity. The cloud-hosted solution also strengthened security and disaster recovery capabilities, aligning with the Foundation's operational goals.
