

# HG TECHNOLOGY

PRO BONO ECONOMICS

## 1. The Challenge

Pro Bono Economics, an organisation that helps charities and social enterprises assess their impact and value, needed a secure and efficient portal to collaborate with their external consultants, known as Economic Associates. The solution had to enable data sharing, document management, and internal communication, while fostering a collaborative environment.

## 2. The Approach

HG Technology partnered with Pro Bono Economics to design and implement a self-service portal using Microsoft SharePoint for infrastructure and security.

The portal was customised to be user-friendly and tailored to specific user roles. Economic Associates can securely access and store documents, while internal staff can seamlessly transfer documents and track project progress. The centralised platform ensures all stakeholders have a clear overview of ongoing projects, enhancing collaboration.

## 4. The Feedback

"We needed to create a portal enabling us to interact securely with our external consultants, and HG Technology's experience and understanding of our business was invaluable in delivering a solution."

– Gemma Bruton, Director of Services,  
Pro Bono Economics

## 3. The Outcome

The portal transformed Pro Bono Economics' interactions with external consultants by providing a secure, centralised platform. It improved communication, streamlined document sharing, and created a more results-driven system. The enhanced collaboration has already delivered measurable benefits, including increased engagement and greater efficiency in project management.
